Assay Training: Xpert® Xpress SARS-CoV-2
For Use with GeneXpert Xpress System

For Use Under an Emergency Use Authorization (EUA) Only

©Cepheid 302-3762 Rev. C April 2020
Training Agenda

• Xpert® Xpress SARS-CoV-2
  – Reagents
  – Sample collection
  – Kit storage and handling
  – Preparing the cartridge
  – Quality Controls
  – Results analysis

• Discussion
Training Objectives

At the end of the training, users will be able to:

Properly store and handle the Xpert® Xpress SARS-CoV-2* kit
Follow proper laboratory safety precautions
Collect and store appropriate specimen(s)
Prepare a cartridge and run the Xpert® Xpress SARS-CoV-2 test
Report the various software generated results
Understand the Xpert® Xpress SARS-CoV-2 control strategy

* For use under an Emergency Use Authorization (EUA) only
Xpert® Xpress SARS-CoV-2

For use under an Emergency Use Authorization (EUA) only
The Cepheid Solution

- Detection of SARS-CoV-2
- On-board internal controls for each sample
  - Probe Check Control (PCC)
  - Specimen Processing Control (SPC)
- Closed cartridge system minimizes risk of contamination
- On-demand results
- Random access
Intended Use

The Xpert Xpress SARS-CoV-2 test is a rapid, real-time RT-PCR test intended for the qualitative detection of nucleic acid from the SARS-CoV-2 in upper respiratory specimens (such as nasopharyngeal, oropharyngeal, nasal, or mid-turbinate swab and/or nasal wash/aspirate) collected from individuals suspected of COVID-19 by their healthcare provider.

Testing of nasopharyngeal, oropharyngeal, nasal, or mid-turbinate swab and nasal wash/aspirate specimens using the Xpert Xpress SARS-CoV-2 test run on the GeneXpert Dx and GeneXpert Infinity systems is limited to laboratories certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high and moderate complexity tests.

Testing of nasopharyngeal, nasal, or mid-turbinate swab specimens using the Xpert Xpress SARS-CoV-2 test run on the GeneXpert Xpress System (Tablet and Hub Configurations) is authorized to be distributed and used in patient care settings outside of the clinical laboratory environment.
Results are for the detection of SARS-CoV-2 RNA. The SARS-CoV-2 RNA is generally detectable in upper respiratory specimens during the acute phase of infection. Positive results are indicative of active infection with SARS-CoV-2; clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status. Positive results do not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease. Laboratories within the United States and its territories are required to report all positive results to the appropriate public health authorities.

Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information.

Testing with the Xpert Xpress SARS-CoV-2 test is intended for use by trained operators who are proficient in performing tests using either GeneXpert Dx, GeneXpert Infinity and/or GeneXpert Xpress systems. The Xpert Xpress SARS-CoV-2 test is only for use under the Food and Drug Administration’s Emergency Use Authorization.
GeneXpert® Xpress System
- GeneXpert Xpress System with Xpress Software
  - Tablet software version 5.0 and 5.1 or Hub software version 6.1 or higher
  - GeneXpert Xpress User’s Guide

Test Kits
- XPRSARS-COV-2-10

Materials Required but not Provided
- 3mL viral transport media or 3mL saline
- Personal Protective Equipment (PPE)
- 1:10 dilution of bleach
- 70% ethanol or denatured ethanol

Optional
- Uninterruptible Power Supply/ Surge Protector
- Printer

For use under an Emergency Use Authorization (EUA) only

Cartridges contain chemically hazardous substances—please see Instructions for Use and Safety Data Sheet for more detailed information.
Xpert® Xpress SARS-CoV-2 Kit Storage and Handling

- Store test kits at 2-28°C. Do not use expired cartridges.
- Each single-use cartridge is used to process one test. Do not reuse processed cartridges.
- Do not open a cartridge until ready to use.
  - Start the test within 30 minutes of adding the sample to the cartridge.
- To avoid cross contamination during sample handling steps, change gloves between samples.
Specimen Collection

For use under an Emergency Use Authorization (EUA) only
Specimen Collection

Specimen Type:
nasopharyngeal swab, nasal swab, mid-turbinate swab

Place specimen into 3mL transport medium
or 3mL of saline

Refer to the CDC Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Persons Under Investigation (PUIs) for Coronavirus Disease 2019 (COVID-19)
Specimen Collection- Nasopharyngeal Swab

1. Insert the swab into either nostril, passing it into the posterior nasopharynx.

2. Rotate swab by firmly brushing against the nasopharynx several times.

3. Remove and place the swab into the tube containing 3 ml of viral transport medium or 3mL of saline.

4. Break swab at the indicated break line and cap the specimen collection tube tightly.
Specimen Collection - Nasopharyngeal Swab

Nasopharyngeal Specimen Collection
For use with Xpert® Nasopharyngeal Sample Collection Kit - Catalog # SWAB/B-100

1. Open the package that contains the swab and transport medium tube. Set the tube aside before collecting the specimen.

2. Open the swab wrapper and remove the swab, taking care not to touch the tip of the swab to any surface.

3. Hold the swab in your hand, pinching in the middle of the swab shaft on the scoreline.

4. Gently insert the swab into the nostril until you touch the posterior nasopharynx. Rotate swab several times.

5. Remove the cap from the tube. Insert the swab into the transport medium.

6. Break the swab shaft against the side of the tube at the scoreline. Avoid splashing contents on the skin. Wash with soap and water if exposed.

7. Replace the cap on the tube and close tightly.

For Xpert Xpress Flu and Xpert Xpress Flu/RSV:
Transport the specimen at 2-8°C. Specimen may be stored for 24 hours at 15-30°C or up to 7 days at 2-8°C.

For Xpert Xpress SARS-CoV-2:
Specimen may be stored for 8 hours at 15-30°C or up to 7 days at 2-8°C.

©2020 Cepheid
In Vitro Diagnostic Use

For use under an Emergency Use Authorization (EUA) only
Specimen Collection- Nasal Swab

1. Insert the nasal swab 1 to 1.5cm into the nostril.

2. Rotate the swab against the inside of the nostril for 3 seconds while applying pressure with a finger to the outside of the nostril.

3. Repeat on the other nostril with the same swab.

4. Remove and place the swab into the tube containing 3 ml of viral transport medium or 3mL of saline.

5. Break swab at the indicated break line and cap the specimen collection tube tightly.
Specimen Collection - Nasal Swab

Nasal Swab Specimen Collection
For use with Xpert® Swab Sample Collection Kit - Catalog # SWAB/F-100

1. Open the package that contains the swab and transport medium tube. Set the tube aside before collecting the specimen.

2. Open the swab wrapper and remove the swab, taking care not to touch the tip of the swab to any surface.

3. Hold the swab in your hand, pinching in the middle of the swab shaft on the scored line.

4. Rotate swab against the inside of the nostril for 3 seconds while applying pressure with a finger to the outside of the nostril.

Do not insert the swabs more than 1-1.5 cm.

5. Repeat Step 4 on the other nostril with the same swab. To avoid specimen contamination, do not touch the swab tip to anything after collecting the specimen.

6. Remove the cap from the tube. Insert the swab into the transport medium.

7. Break the swab shaft against the side of the tube at the scored line.

Avoid splashing contents on the skin. Wash with soap and water if exposed.

8. Replace the cap on the tube and close tightly.

For Xpert Xpress Flu and Xpert Xpress Flu/RSV:
Specimen may be stored for 24 hours at 15-30°C or up to 7 days at 2-8°C.

For Xpert Xpress SARs-CoV-2:
Specimen may be stored for 8 hours at 15-30°C or up to 7 days at 2-8°C.

©Cepheid

For use under an Emergency Use Authorization (EUA) only
Specimen Collection- Mid-Turbinate Swab

1. Insert the mid-turbinate swab into either nostril, passing it into the mid-turbinate area

2. Rotate swab by firmly brushing against the mid-turbinate area several times.

3. Remove and place the swab into the tube containing 3ml of viral transport medium or 3ml of saline.

4. Break swab at the indicated break line and cap the specimen collection tube tightly.

Cartridge Preparation
Warnings and Precautions

• Do not shake the cartridge
• Do not use a cartridge… :
  − if it appears wet, has leaked with signs of precipitate, or if the lid seal appears to have been broken
  − if it appears damaged
  − that has been dropped after removing it from packaging
  − that has been shaken. Shaking or dropping the cartridge after opening the cartridge lid may yield indeterminate results.
  − that has a damaged reaction tube (bent, missing, cracked)
  − that has been used: each cartridge is single-use to process one test
  − Do not reuse pipettes
  − Do not reuse swabs
Proper Cartridge Handling Techniques

Correct

– Do not touch the reaction tube
– Keep the cartridge upright
– Do not tilt after sample is added

Incorrect
Xpert® Xpress SARS-CoV-2
Cartridge Preparation

Sample Qualification – check if all items below are present:
1. Transport media or saline containing swab
2. Patient name or identifier on the tube
3. Cartridges and transport media or saline are within the expiration date

Good Laboratory Practices:
• Wear clean gloves and lab coats.
• Change gloves between samples.
• Clean work surface with 1:10 dilution of bleach followed by 70% ethanol solution.

Refer to the package insert for detailed instructions, precautions, and warnings.

© 2020 Cepheid
For use under the Emergency Use Authorization (EUA) only.
300-3705, Rev. A, March 2020

©Cepheid
For use under an Emergency Use Authorization (EUA) only.
Take one Xpert cartridge for each sample.

Rapidly invert the tube 5 times.

Open the cartridge lid. Using a clean 300 μL pipette (supplied), transfer 300 μL (one draw) of the sample to the cartridge.

Start the test within the timeframe specified in the Instructions For Use.

Close the cartridge lid.
**Automated Xpert® Xpress SARS-CoV-2**

1. Add the sample to the cartridge.
2. Place the cartridge into the instrument.
3. Nucleic acids are purified.
4. Purified nucleic acids mix with PCR reagents.
5. Simultaneous amplification and detection occurs.
6. Results are ready to view.
Waste Disposal

Biological specimens, transfer devices, and used cartridges should be considered capable of transmitting infectious agents and require use of standard precautions.

Follow your institution’s environmental waste procedures for proper disposal of used cartridges and unused reagents. These materials may exhibit characteristics of chemical hazardous waste requiring specific national or regional disposal procedures.

If national or regional regulations do not provide clear direction on proper disposal, biological specimens and used cartridges should be disposed per WHO [World Health Organization] medical waste handling and disposal guidelines.
Quality Control

Refer to the Instructions For Use for complete details
Xpert® Xpress SARS-CoV-2 Cartridge Controls

- Each Xpert cartridge is a self-contained test device.

- A Sample Processing Control (SPC) and a Probe Check Control (PCC) are included in the cartridge.

- The SPC is present to:
  - verifies that sample processing is adequate
  - monitor for the presence of inhibitors in the PCR reaction

- The PCC verifies:
  - reagent rehydration
  - PCR tube filling in the cartridge
  - probe integrity
  - dye stability

If either control fails, a NO RESULT- REPEAT TEST result will be reported.
Commercially Available External Controls

<table>
<thead>
<tr>
<th>Vendor</th>
<th>Description</th>
<th>Configuration</th>
<th>Storage</th>
</tr>
</thead>
<tbody>
<tr>
<td>SeraCare AccuPlex™ SARS-CoV-2 Reference Material Kit Catalog # 0505-0126</td>
<td>Positive Control</td>
<td>5 x 1.5mL</td>
<td>2-8°C or -20°C</td>
</tr>
<tr>
<td></td>
<td>Negative Control</td>
<td>5 x 1.5mL</td>
<td>2-8°C or -20°C</td>
</tr>
</tbody>
</table>

1. Open the cartridge lid.
2. Rapidly invert the external control tube 5 times.
3. Using a clean transfer pipette, transfer one draw of the external control sample into the large opening (Sample Chamber) in the cartridge.

*To minimize degradation of the control material, return any unused sample to the recommended storage conditions immediately after use.*

- Many other vendors for quality control material are also available in addition to the one outlined above.
- External controls should be used in accordance with local, state accrediting organizations, as applicable.
External Controls should be performed:

• Each time a new lot of Xpert® Xpress SARS-CoV-2 Assay reagents is received.
• Each time a new shipment of Xpert Xpress SARS-CoV-2 Assay reagents is received even if it is the same lot previously received.
• Each time a new operator is performing the test (i.e., operator who has not performed the test recently).
• When problems (storage, operator, instrument, or other) are suspected or identified.
• If otherwise required by your institution’s standard QC procedures.

If the QC lockout feature is enabled, follow the QC Lockout instructions detailed in the GeneXpert Xpress System User’s Guide.
Results Analysis

Refer to the Instructions For Use for complete details

For use under an Emergency Use Authorization (EUA) only
Early Assay Termination

- The Xpert Xpress SARS-CoV-2 test includes an Early Assay Termination (EAT) function which will provide earlier time to results in high titer specimens.
- When SARS-CoV-2 titers are high enough to initiate the EAT function, the SPC amplification curve may not be seen and its results may not be reported.

Reasons to Repeat the Assay

- **A PRESUMPTIVE POSITIVE** result indicates the 2019 novel coronavirus (SARS-CoV-2) nucleic acids may be present. Only one of the SARS-CoV-2 nucleic acid target was detected (E gene) while the other SARS-CoV-2 nucleic acid target (N2 gene) was not detected.

- An **INSTRUMENT ERROR** result could be due to, but not limited to, the maximum pressure limits were exceeded.

- **A NO RESULT- REPEAT TEST** indicates that insufficient data were collected. For example, Probe Check Control failed or a power failure occurred.

If an External Control fails to perform as expected, repeat external control test and/or contact Cepheid Technical Support for assistance.
INSTRUMENT ERROR

- If you encounter an INSTRUMENT ERROR, touch CLEAR ERROR and follow the on-screen instructions.
- When the Home screen appears, follow the retest procedure.
- If another INSTRUMENT ERROR occurs upon retest, contact Technical Support for assistance.

Retest Procedure

1. Discard used cartridge

2. Obtain the residual specimen, mix according to Instructions For Use.
   - If the leftover specimen volume is insufficient, or the retest continues to return an INSTRUMENT ERROR or NO RESULT, collect a new specimen.

3. Obtain a new cartridge
   - Process the specimen per the Instructions For Use.

4. Run the test on the System
Technical Assistance

• Before contacting Cepheid Technical Support, collect the following information:
  – Product name
  – Lot number
  – Serial number of the System
  – Error messages (if any)
  – Software version and, if applicable, Computer Service Tag number

• Log your complaint online using the following link http://www.cepheid.com/us/support
  - Create a Support Case
• Call: 1-888-838-3222
• Email: techsupport@cepheid.com
Thank You.
